

## Recycled Water

To improve the reliability of the Tri-Valley’s water supply, particularly in dry years, DSRSD and East Bay Municipal Utility District (EBMUD) created the San Ramon Valley Recycled Water Program (SRVRWP) in 1995. The partnership has built a water recycling plant adjacent to the DSRSD wastewater treatment facility and a backbone transmission system that connects to DSRSD and EBMUD recycled pipelines. DSRSD personnel operate these facilities on behalf of the partnership. Recycled water is used in the Tri Valley area primarily by large irrigation customers: golf courses, parks, greenbelts, roadway medians, schools, office complexes, and common areas in homeowner associations. A joint powers authority, the DSRSD-EBMUD Recycled Water Authority (DERWA), governs the partnership. Two directors from each agency serve on the DERWA Board of Directors.

## Wastewater Collection and Treatment

DSRSD owns and operates sewers in the cities of Dublin and San Ramon and a wastewater treatment plant in the City of Pleasanton. Under contract, DSRSD also treats wastewater collected by the City of Pleasanton. DSRSD’s service area is shown in Figure 12-1.
