ZEISS Opens High-Tech Innovation Center in Dublin

ZEISS, the leading global optics and optoelectronics technology company, has completed the construction of its new R&D, production, sales, and customer service site at 5300 Central Parkway in Dublin.

The ZEISS Innovation Center encompassed 208,650 square feet over three floors and accommodates approximately 700 workspaces. The move-in will be phased over the coming months in compliance with COVID-19 precautions and state and federal regulations.

The Center brings together hundreds of ZEISS employees and key functions under one roof including research laboratories, service, and production facilities as well as customer experience and demonstration centers showcasing recent ZEISS innovations. The Center also serves as the US headquarters for the ZEISS medical technology business, Carl Zeiss Meditec AG. The Center will house the X-Ray Microscopy business, the ZEISS Microscopy Customer Center, and Process Control Solutions activities for the ZEISS Semiconductor Manufacturing Technology segment.

The Innovation Center is designed to foster entrepreneurial ventures among ZEISS employees, research partners, and customers in a state-of-the-art open, team-oriented work environment.

The building meets the highest green energy and sustainability standards:

- The building is powered by solar energy, supported by use-based light and air controls and a heat recovery system.
- Sophisticated light and insulation technologies help regulate the indoor temperature.
- Rainwater collection and retention, along with wetland enhancement and maintenance, are incorporated into the exterior design.
- Electric vehicle chargers, bike storage, and carpool options for employees

ZEISS develops and distributes cutting-edge medical technology solutions for ophthalmology and microsurgery worldwide. The \$180 million investment in the new high-tech site is an integral part of the ZEISS global strategy to expand its presence close to research centers and growth markets. The ZEISS Innovation Center's R&D efforts will increasingly focus on digital solutions and scientific and industry partnerships spanning disciplines and technologies – key drivers behind the company's decision to locate the Center in the Bay Area.
