The preparation of this report has been financed in part by grants from the Federal Highway Administration, U.S. Department of Transportation.

The contents of this report do not necessarily reflect the official views or policy of the U.S. Department of Transportation.

Executive Summary

In 2023, Nichols Consulting Engineers, Chtd. (NCE) was selected by the Metropolitan Transportation Commission (MTC) to update the City of Dublin's pavement management program (PMP) as part of the Pavement Management Technical Assistance Program, Round 24 (P-TAP 24). This report summarizes the results of the 2023 update and its purpose to help educate policy makers about the current condition of the street network and the impact of various funding scenarios on future network condition.

The City of Dublin (City) is responsible for maintaining approximately 146.3 centerline miles of pavement, or 789 pavement sections, which represents a substantial investment of approximately \$356 million. In 2023, NCE collected pavement condition data throughout the entire network using MTC distress protocols. Survey data were entered into the StreetSaver® database, which the City uses as a decision-support tool.

Overall, the City's pavement network is currently in "Good" condition with an average pavement condition index (PCI) of 79. Over 77 percent of street network is in "Good" condition with only 0.5 percent streets in "Failed" condition.

The budget needs analysis indicated that the City needs to spend \$96.2 million over the next ten years to bring the street network to a condition that can be maintained with on-going preventive maintenance in the most cost-effective way. Four alternative budget scenarios were performed to illustrate the impacts of different funding levels. The following table lists each scenario with its corresponding ten-year budget, the PCI and deferred maintenance at the end of the analysis period. NCE recommends that the City pursue Scenario 3, which will maintain the network PCI to 79 in ten years. This scenario decrease the deferred maintenance by 2033. It will require \$76.7 million over the next ten years.

Scenario	Description	10-Year Budget (\$M)	2033 PCI	2033 Deferred Maintenance (\$M)
1	Funding Level of \$2.2M – \$2.6M/Year	31.3	71	46.7
2	Funding Level of \$4.5M/Year	50.8	75	34.1
3	Maintain Current PCI at 79	76.7	79	13.0
4	Improve PCI to 82 in 5 Years and Maintain	92.7	82	4.4

Quality Management Report

1 Introduction and Background

In 2023, Nichols Consulting Engineers, Chtd. (NCE) was selected by the Metropolitan Transportation Commission (MTC) to update the City's pavement management program (PMP) as part of the Pavement Management Technical Assistance Program, Round 24 (P-TAP 24). This report summarizes the results of the 2023 update and its purpose to help educate policy makers about the current condition of the street network and the impact of various funding scenarios on future network condition.

In general, PMPs are "designed to provide objective information and useful data for analysis so that... managers can make more consistent, cost effective, and defensible decisions related to the preservation of a pavement network."¹

The goals of the 2023 update were to:

- Update the existing pavement network inventory to include new streets,
- Perform pavement condition surveys,
- Update historical maintenance records (e.g., previously resurfaced pavements),
- Update the maintenance and rehabilitation decision tree and associated costs,
- Perform budgetary analyses and determine funding needs, and
- Prepare a final PMP report documenting the results of the update.

To update City's PMP, NCE performed walking condition survey in 2023 using the Metropolitan Transportation Commission's (MTC) modified² ASTM D6433³ survey procedures for the entire network, including all city-maintained streets and trails. Walking surveys were performed by one or two-person crews to record all pavement distresses. The surveys did not include non-pavement issues such as traffic, safety and road hazards, geometric issues, shoulders, sidewalks, curb and gutters, drainage issues, or immediate maintenance needs. All survey data were entered into the City's StreetSaver® database, and pavement condition index (PCI) calculations were performed. NCE then met with agency representatives and reviewed and updated the City's decision tree including maintenance and rehabilitation (M&R) strategies and treatment unit costs. A budget needs analysis was then performed, and three budget scenarios were analyzed for the street network.

This report answers the following questions for the City of Dublin (City):

- What does the City's pavement network include?
- What is the current condition of the pavement network?
- What are the City's current M&R strategies?
- How much funding is required to perform all needed M&R treatments over the next ten years?

¹ AASHTO "Guidelines for Pavement Management Systems". American Association of State Highway and Transportation Officials, Washington, DC, July 1990.

² PCI Distress Identification Manuals (AC 5th Edition, PCC 4th Edition), Metropolitan Transportation Commission, San Francisco, CA March 2022.

³ ASTM D6433-18 Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys, ASTM International, West Conshohocken, PA, 2018, www.astm.org.

- What effect with the City's existing funding have on the network condition and overall deferred maintenance?
- What effect will other funding levels have on the network condition and deferred maintenance?

2 Network Summary

The City is responsible for maintaining approximately 146 centerline miles of streets (or 789 pavement sections). The whole network is composed of asphalt concrete (AC) pavements. Please note that trails are not included in the following analysis.

Table 1. Network Summary Statistics

Functional Class	Number of Sections	Centerline Miles	Lane Miles	Network Area (%)
Arterial	123	40.6	102.6	31.6%
Collector	105	28.4	64.0	21.6%
Residential	561	77.3	154.6	46.8%
Total	789	146.3	321.2	100.0%
Other (Trails)	123	22.4	24.0	NA

The street network replacement cost is estimated to be approximately \$356 million. This can be viewed as the value of the pavement network and is the amount needed to fund a reconstruction of the entire paved network. The replacement cost is calculated by multiplying the total pavement area by the unit cost of reconstruction of the pavement structure. It does not include related infrastructure assets such as sidewalks, signals, markings, signs, or storm drains.

3 Pavement Condition

Pavement condition is typically quantified using the pavement condition index (PCI), which ranges from 100 (best) to 0 (worst). Pavement condition is affected by the environment, traffic loads and volumes, construction materials, and age. Figure 1 shows examples of streets with varying PCIs.

The PCI scale is divided into four general condition categories. Pavements in “Good” condition have a PCI above 70, pavements in “Fair” condition have a PCI between 50 and 69, pavements in “Poor” condition have a PCI between 25 and 49, and finally pavements in “Failed” condition have a PCI below 25.

Figure 1. Examples of Dublin Streets with Different PCIs

A list of all sections in the network along with their attributes, including the PCI at the time of last inspection, is provided in Appendix A. For convenience, two versions are provided – one sorted alphabetically by street name and the other sorted by descending PCI.

3.1 City’s Pavement Condition Index

The current average PCI for the City’s network is 79. The 3-year moving average PCI in 2022 was 80. This value is an area-weighted calculation performed in StreetSaver® and is based on the condition survey performed in 2023.

Figure 2 illustrates the City’s historical network PCI for the streets. The PCI values shown were obtained from field inspection updates and then a 3-year moving average was calculated. The City’s network PCI was maintained above 85 over the last decade and it decreased by 5 points to 80 in 2022 due to less maintenance work being performed over the last three years.

Figure 2. Historical Network PCI and Treatment History since 2010

3.2 City's Network Condition Breakdown

Figure 3 breaks down the current street network PCI by functional classification. The average pavement condition for residential is the highest with PCIs of 83 followed by collectors and arterials tying at a PCI of 76. Table 2 summarizes the street network by condition category and functional classification. Approximately, over 77 percent of the street network is in “Good” condition with 0.5 percent streets in “Failed” condition.

Figure 3. Network Condition Breakdown (Average PCI) by Functional Classification

Table 2. Pavement Condition Breakdown by Functional Classification

Condition Category	PCI Range	Arterial (%)	Collector (%)	Residential (%)	Entire Network (%)
Good	70 – 100	21.0	15.2	41.4	77.6
Fair	50 – 69	9.0	5.4	4.6	19.0
Poor	25 – 49	1.6	0.8	0.5	2.9
Failed	< 25	0.0	0.2	0.3	0.5
Total	-	31.6	21.6	46.8	100.0

3.3 PCI Comparison with Neighboring Agencies

Figure 4 shows the City's average network PCI compared to neighboring agencies from the 2021 Pavement Condition of Bay Area Jurisdictions⁴ Report. As illustrated, the City's network PCI is the highest among the neighboring agencies when compared with their 3-year moving average PCIs. The City's available funding (\$/mile) is less compared to most jurisdictions because majority of the City's network is in good condition. The funding needs will increase as the roadway network ages and pavements deteriorate.

Figure 4. Comparison of City's 2021 Network PCI and Available Fund to Neighboring Agencies

⁴ "Pavement Condition of Bay Area Jurisdictions 2021" Metropolitan Transportation Commission 2021.

4 Maintenance and Rehabilitation Strategies

The City's current M&R strategies include cost-effective preventive treatments. In general, slurry seals will be applied to pavements in "Good" condition; pavements in "Fair" condition will receive a rubber cape seal with digouts or a thin mill & hot mix asphalt (HMA) overlay with dig-outs; pavements in "Poor" condition will receive a 3-inch cold in-place recycling (CIR) with a thin HMA overlay or a 3-inch mill & HMA overlay; and full depth rehabilitation (FDR) with 3.5-inch overlays will be performed when pavements are in "Failed" condition. The City's M&R strategies are formalized into a decision tree⁵ (presented in Appendix B), which is instrumental in performing the budget needs analysis and budget scenarios.

Experience and research have shown that it costs much less to maintain pavement in good condition than to repair pavement that has already failed. Figure 5 shows the treatment unit cost for arterials as examples that consists of 31.6 percent of the total streets network. As shown, by allowing pavements to deteriorate, streets that once cost \$4.50/square yard (SY) to seal may soon cost \$81.50/SY to overlay, or \$126.50/SY to reconstruct. In other words, delaying repairs can significantly increase M&R costs. Note that a slurry seal can be placed on approximately 28 times as many lane miles as those requiring FDR for the pavements with failed condition.

Figure 5. Costs of Maintaining Residential Pavement Over Time

⁵ Note: The StreetSaver® "Maintenance and Rehabilitation Decision Tree" divides the "Fair" condition category to separate pavements with primarily non-load-related distresses (e.g., longitudinal cracking) from those with load-related distresses (e.g., fatigue cracking).

5 Budget Analyses

Based on the principle that it costs less to maintain streets in good condition than it does to repair those that have failed, cost-effective PMPs employ strategies that eliminate deferred maintenance⁶ and then maintain the network with on-going preventive maintenance. Such strategies bring the network condition to an optimal PCI that can be maintained over time.

The first step in developing such a cost-effective strategy is to determine the total maintenance budget needs of the network. The next step is to conduct alternative budget scenario analyses. In consultation with the City, NCE selected and performed four funding scenarios for the analysis using StreetSaver® based on an inflation rate of 4.0 percent for an analysis period of ten years:

- **Scenario 1: Funding Level of \$2.2M – \$2.6M/Year** - This scenario assumes the City will spend approximately \$2.2 to \$2.6 million per year on pavement M&R for the next ten years.
- **Scenario 2: Funding Level of \$4.5M/Year** - This scenario assumes the City will spend approximately \$4.5 million per year on pavement M&R for the next ten years.
- **Scenario 3: Maintain Current PCI at 79**- This scenario aims to maintain the existing network PCI of 79 over the next ten years.
- **Scenario 3: Improve PCI to 82 in 5 Years and Maintain**- This aims to improve the network PCI to 82 over the next five years and maintain it at that level.

The budget needs analysis and budget scenarios are presented in the following subsections. The detailed results of the budget needs analysis are provided in Appendix C. The detailed results of the budget scenarios are provided in Appendix D. Additionally, maps illustrating the current pavement condition and the projected 2033 pavement condition for each scenario are provided in Appendix E.

⁶ Deferred maintenance is M&R not performed due to insufficient funding.

5.1 Budget Needs Analysis

The total budget needs for the network represents the cost associated with performing M&R treatments at the optimal time – optimal meaning the PCI is maximized and the cost is minimized – over the analysis period. This was done by performing a budget needs analysis in StreetSaver® with an inflation rate of 4.0 percent for an analysis period of ten years.

The results of the budget needs analysis are presented in Table 3. The total budget needs for the City for the next ten years is estimated to be \$96.2 million. Of the total budget needs, approximately \$28.1 million (29.2 percent) is devoted to preventive maintenance, while the rest is allocated for rehabilitation and reconstruction treatments.

Table 3. Summary Results for Budget Needs Analysis

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Budget Needs (\$M)	20.9	7.8	11.8	12.7	5.3	6.7	5.9	5.8	7.8	11.5	96.2
Treated PCI	84	84	84	84	84	84	83	83	83	84	NA
Untreated PCI	79	79	77	75	73	71	70	68	66	63	NA

If the City follows this ideal, cost-effective strategy, the average network PCI will immediately increase as a large amount of current City deferred maintenance (\$20.9 million) is addressed in the first year, and then maintained at 83 to 84. This type of budget, that addresses all the deferred maintenance in the first year, is known as front-loaded. Alternatively, if no maintenance is performed over the next ten years, the network PCI will drop to 63 by 2033. The Untreated PCI includes City's scheduled projects in 2024, 2025, and 2027. Scheduled projects are listed in below:

- 2024:
 - 2024 Slurry Seal (Dublin Ranch Residential Area)
 - Dublin Blvd Overlay (Hacienda-John Monego/John Monego)
- 2025:
 - Tassajara Rd Mill and Overlay (from North Dublin Ranch to Quarry Lanes improvements)
 - Croak Road Mill and Overlay (from S. Terracina Dr to Dublin Blvd Extension)
- 2027:
 - Village Pkwy reconstruction (from Amador Valley Blvd and Kimball Ave/North City Limit)

5.2 Scenario 1: Funding Level of \$2.2M – \$2.6M/Year

This scenario assumes the City will have \$2.2 to \$2.6 million per year for pavement M&R for the next ten years. The City’s scheduled projects in 2024, and 2025, and 2027 are included in the analysis. As shown in Table 4 and Figure 6, the network PCI will decrease to 71 and the deferred maintenance will increase more than double to \$46.7 million by 2033. The amount of the network in “Good” condition will decrease to about 61 percent while the portion of network in “Poor” and “Failed” conditions will increase significantly to approximately 19 percent. A list of sections selected for treatment are provided in Appendix F.

Table 4. Summary Results for Scenario 1

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Budget (\$M)	2.4*	5.6*	2.6	5.1*	2.6	2.6	2.6	2.6	2.6	2.6	31.3
Deferred Maintenance (\$M)	16.0	20.1	25.9	30.5	37.3	38.2	43.5	40.7	38.5	46.7	NA
Treated PCI	79	79	78	77	76	75	74	73	72	71	NA

*Includes scheduled projects in 2024, 2025, and 2027.

Figure 6. PCI vs Deferred Maintenance for Scenario 1

5.3 Scenario 2: Funding Level of \$4.5M/Year

This scenario assumes the City will have \$4.5 million per year for pavement M&R for the next ten years. As shown in Table 5 and Figure 7, the network PCI will increase above 80 in the first four years and then decrease to 75 by 2033. The deferred maintenance will increase to \$34.1 million by the end of analysis period. The amount of the network in “Good” condition will decrease slightly to about 75 percent while the portion of network in “Poor” and “Failed” conditions will increase to approximately 14 percent. A list of sections selected for treatment are provided in Appendix F.

Table 5. Summary Results for Scenario 2

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Budget (\$M)	4.6*	7.8*	4.5	7.0*	4.5	4.5	4.5	4.5	4.5	4.4	50.8
Deferred Maintenance (\$M)	13.8	15.6	19.3	21.0	23.3	24.8	29.2	28.7	27.5	34.1	NA
Treated PCI	81	81	80	80	79	78	77	77	76	75	NA

*Includes scheduled projects in 2024, 2025, and 2027.

Figure 7. PCI vs Deferred Maintenance for Scenario 2

5.4 Scenario 3: Maintain Current PCI at 79 (\$7.7M/Year on Average)

This scenario aims to maintain the existing network PCI at 79 over the analysis period. As shown in Table 6, the financial commitment required to accomplish this goal is \$76.7 million over ten years (or \$7.7 million per year). This will result in 82.4 percent of the network being in “Good” condition with less than 2 percent in “Failed” condition. Figure 8 shows that deferred maintenance will decrease by 38 percent to \$13.0 million by 2033.

If the City follows this scenario, on average 47 residential streets per year (equivalent to average of 6.7 miles of streets per year) will be treated. That is equal to approximately 12 percent of the City streets being under construction each year.

Table 6. Summary Results for Scenario 3

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Budget (\$M)	2.4*	6.3*	6.5	9.5*	9.0	9.0	9.0	9.0	8.0	8.0	76.7
Deferred Maintenance (\$M)	16.0	19.4	21.2	23.2	24.0	24.3	28.2	19.8	16.1	13.0	NA
Treated PCI	79	79	79	79	79	79	79	79	79	79	NA

*Includes scheduled projects in 2024, 2025, and 2027.

Figure 8. PCI vs Deferred Maintenance for Scenario 3

5.5 Scenario 4: Increase PCI to 82 in 5 Years and Maintain (\$9.3M/Year on Average)

This scenario aims to improve the network PCI to 82 by 2028 and maintain it at that level through 2033. As shown in Table 7 and Figure 9, the total budget required for this goal is \$92.7 million over ten years (or \$9.3 million per year). This scenario will result in 91.7 percent of the network being in “Good” condition with less than 1 percent of the street network in the “Failed” and “Poor” conditions. The deferred maintenance will decrease substantially to \$4.4 million by 2033.

If the City pursue this scenario, on average 63 residential streets equivalent to average of 8.0 miles per year streets will be treated each year. It means that approximately 14 percent of the City streets will be under construction each year.

Table 7. Summary Results for Scenario 4

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Budget (\$M)	2.4*	8.8*	10.0	14.5*	15.0	10.0	9.0	9.5	6.5	7.0	92.7
Deferred Maintenance (\$M)	16.0	16.9	15.5	12.4	7.2	4.9	9.4	7.8	6.2	4.4	NA
Treated PCI	80	80	81	82	82	82	82	82	82	82	NA

*Includes scheduled projects in 2024, 2025, and 2027.

Figure 9. PCI vs Deferred Maintenance for Scenario 4

5.6 Scenario Comparisons

Figure 10 graphically compares the annual changes in PCI for each of the three scenarios. As previously noted, the average network PCI will decrease to 71 and 75 in Scenarios 1 and 2, respectively by 2033. The average network PCI will be maintained at 79 in Scenario 3 while it will increase to 82 in ten years in Scenario 4 owing to the substantial investment in the pavement network.

Figure 10. Comparison of Annual PCI by Scenario

Figure 11 illustrates the changes in deferred maintenance over time for each scenario. For Scenario 1, the deferred maintenance will more than double to \$46.7 million while it will increase by 63 percent in Scenario 2 by the end of the analysis period. In Scenario 3, the deferred maintenance is decreased to \$13.0 million. In Scenario 4, the deferred maintenance will drop considerably by 80 percent to \$4.4 million by 2033.

Figure 11. Comparison of Annual Deferred Maintenance by Scenario

Figure 12 illustrates the percent change in pavement condition for each scenario. As noted earlier, currently more than 77.6 percent of the network is in “Good” condition with 3.4 percent of the sections in “Failed” or “Poor” conditions. For Scenario 1, the portion of the network in “Good” condition will decrease to 61.4 percent and portion of network in “Failed” and “Poor” conditions will increase by more than five times. For Scenario 2, “Good” condition will decrease slightly to 75.4 percent while portion of network in “Failed” and “Poor” conditions will rise by more than four times. For Scenario 3, the “Good” condition streets are increased to 82.4 percent with small increase in the percent of the network in “Failed” or “Poor” condition. Scenario 4 shows the most improvement by increasing the “Good” portion of the network to 91.7 percent, eliminating the “Poor” condition, and limiting the “Failed” condition to less than 1 percent of the network.

Figure 12. Comparison of Pavement Condition Breakdown by Scenario

Table 8 summarizes the total 10-year budget needs to achieve the goal of each scenario. Scenarios 1 and 2 require \$31.3 and \$50.8 million, respectively over the next 10 years. Scenario 3 requires \$76.7 million to maintain current PCI while scenario 4 requires \$92.7 million to improve pavement condition, that is more than 20 percent compared to scenario 3.

Table 8. Summary of the 10-Year Budget for the Scenarios

Scenario	10-Year Budget (\$M)
S1: Funding Level of \$2.2M to \$2.6M/Year	31.3
S2: Funding Level of \$4.5M/Year	50.8
S3: Maintain Current PCI at 79	76.7
S4: Increase PCI to 82 in 5 Years and Maintain	92.7

6 Conclusions and Recommendations

In summary, the City of Dublin has a substantial investment of \$356 million in the pavement network. Overall, the City's streets are in "Good" condition with a 2023 average network PCI of 79. Approximately 77.6 percent of the street network is in "Good" condition with 3.4 percent sections in "Failed" or "Poor" conditions.

The analyses indicate that at an inflation rate of 4.0 percent, the City needs to spend approximately \$96.2 million on maintenance and rehabilitation over the next ten years to optimally repair all pavement sections, thus bringing the network into a condition that can be maintained with on-going preventive maintenance. In the long run, this strategy will save the City money by preventing future pavement deterioration to levels requiring rehabilitation or reconstruction.

Based on the data collected and the scenarios analyzed and presented in this report, NCE offers the following recommendations

1. **Funding** – The primary goal of PMPs should be to offer users a safe and functional pavement network without unduly increasing the maintenance burden in the future. With that in mind, the recommended scenario for the City is Scenario 3, which requires approximately \$76.7 million over the next ten years. This budget allocation will maintain the current network PCI at 79 and decrease the deferred maintenance.

To address the gap between the City's existing funding and the recommended scenario, NCE recommends the City pursue additional funding sources. Potential sources include:

Federal Funding Sources

- American Rescue Plan Act (ARPA)
- Community Development Block Grants (CDBG)
- Congestion Mitigation and Air Quality Improvement Program (CMAQ)
- Federal Emergency Management Agency (FEMA)
- Highway Safety Improvement Program (HSIP)
- Bipartisan Infrastructure Investment and Jobs Act (IIJA)
- Regional Surface Transportation Program (RSTP)
- Surface Transportation Program (STP)
- Secure Rural Schools and Community Self-Determination Act

State Funding Sources

- Active Transportation Program (ATP), which now includes the Bicycle Transportation Account (BTA) and Safe Routes to Schools (SR2S)
- AB 2766 (vehicle surcharge)
- CalRecycle grants
- State Transportation Improvement Program (STIP)
- State Water Resource Control Board
- Transportation Development Act (TDA)
- Traffic Safety Fund
- Transportation Uniform Mitigation Fee (TUMF)
- Vehicle License Fees (VLF)

Local/Regional Funding Sources

- MTC PTAP (Pavement Management Technical Assistance Program)
- Development impact fees
- Enterprise Funds (solid waste and water) MTC PTAP (Pavement Management Technical Assistance Program)
- Flood Control Districts
- General funds
- Local sales tax measures
- OBAG (One Bay Area Grant Program)
- Parcel/property taxes
- Solid waste funds
- Traffic impact fees
- Traffic safety/circulation fees
- Transportation mitigation fees
- Transient Occupancy Taxes (TOT)
- Underground impact fees
- Utilities (e.g., stormwater, water, wastewater enterprise funds)
- Various assessment districts (lighting, maintenance, flood control, community facilities)
- Vehicle registration fees
- Vehicle code fines

2. **Pavement Management Strategies** – Since a significant portion of the City’s streets are currently in “Good” condition (77.6 percent), it is important to maintain that condition to the extent possible. Preservation occurs when streets with PCIs higher than 70 receive treatments such as surface seals (slurry, microsurfacing, etc.). Seals are relatively inexpensive treatments that prevent moisture ingress and thus preserve the integrity of the underlying base material. NCE recommends that the City balance preventive maintenance with rehabilitation and reconstruction projects to preserve pavements in “Good” condition, improve pavements in “Poor” condition, and avoid increasing the deferred maintenance.
3. **Reinspection Strategies** – In order to make appropriate management decisions based on current data, NCE recommends that the City perform condition inspections on arterials and collectors every 2 years and on residential streets at least every 4 to 5 years. Additionally, since StreetSaver® and other prediction models do not yet take into account the effect of specialized materials such as asphalt-binders with rubber or polymers, the actual performance of city pavements may not be fully captured in the analysis models. For this additional reason, NCE recommends regular pavement condition surveys to ensure model accuracy and relevance. This also ensures that the City remains compliant with MTC requirements for certification and funding.
4. **M&R Decision Tree** – NCE recommends that the City annually review and update the M&R treatment strategies and associated unit costs to reflect current construction techniques and changing costs. This will ensure that the results for the budget analyses are reliable and as accurate as possible.

Appendix A

Section Description Inventory

Section Description Inventory Report

This report lists a variety of section description information for each of the City's pavement sections. It lists the street and section identifiers, limits, functional class, surface type, number of lanes, length, width, area, Inspected PCI, and PCI date.

All of the City's pavement sections are included in the report. Two versions of the report are provided. The first is sorted alphabetically by Street Name and Section ID and the second report is sorted by descending PCI. The field descriptions in this report are listed below:

COLUMN	DESCRIPTION
Street ID	Street Identification - A code up to ten characters/digits to identify the street. Generally, the street name is truncated to six characters. The Street ID should be unique for each street.
Section ID	Section Identification - A code up to ten characters/digits to identify the section number. The Section ID must be unique for each section of one street.
Street Name	Street Name - The name of the street as indicated by street signs in the field.
Begin Location	Beginning limit of the section.
End Location	Ending limit of the section.
No. of Lanes	Number of travel lanes.
Functional Class (FC)	Functional Classification: A = Arterial, C = Collector, R = Residential
Length (ft)	Length of the section in feet.
Width (ft)	Average width of the section in feet.
Area (sf)	Area of section in square feet.
Surface Type (ST)	Surface Type (A = AC Pavement, AC/AC = Asphalt Concrete Overlay, PCC = Portland Cement Concrete, GRAVEL = Gravel).
PCI Date	The last inspection date or rehabilitation date.
PCI	Average PCI for the section. The value is based on the last inspection.

Appendix B

Maintenance and Rehabilitation Decision Tree

Maintenance and Rehabilitation (M&R) Decision Tree

This report presents the current maintenance and rehabilitation decision tree that exists in the database. The decision tree forms the basis for all of the budgetary computations included in this report. ***Changes to the decision tree will make the results in the budget reports invalid.*** All pavement treatment unit costs relevant to the road types in the database were updated.

The decision tree lists the treatments and costs selected for preventive maintenance and rehabilitation activities. Each line represents a specific combination of functional classification and surface type.

The preventive maintenance portion of the report is identified as Condition Category I – Very Good. All preventive maintenance treatment listings are assigned only to sections in Condition Category I where the $PCI \geq 70$. Sections with PCI values less than 70 are assigned to treatments listed in Categories II through V.

In the preventive maintenance category ($PCI \geq 70$), a time sequence is used to identify the appropriate treatment and cost. Each preventive maintenance treatment description consists of three parts: 1) a CRACK treatment, 2) a SURFACE treatment, and 3) a RESTORATION treatment. These three parts allow the user to specify one of three different preventive maintenance treatments depending on the prior maintenance history of the section.

1. The CRACK treatment part can be used to specify the most frequent type of preventive maintenance activity planned (typically crack seals).
2. The SURFACE treatment part can be used to specify more extensive and less frequent preventive maintenance activities, such as chip seals or slurry seals. For example, a crack seal can be specified on a 3-year cycle with a slurry seal specified after 5 years.
3. The RESTORATION part can be used to specify a surface restoration treatment (such as an overlay) to be performed after a specified number of surface treatments. For example, after a certain number of successive slurry seals, an overlay can be specified instead of another slurry seal.

Rehabilitation treatments are assigned to sections in Condition Categories II through V (PCI less than 70). Each line is defined by a specific combination of functional classification, surface type, and condition category.

COLUMN	DESCRIPTION
Functional Class	Functional Classification identifying the branch
Surface	Surface Type identifying the branch number.
Condition Category	Condition Category (I through V).
Treatment Type	First Row (Crack Treatment) indicates localized treatment (e.g., crack sealing). Second Row (Surface Treatment) indicates surface treatment (e.g., slurry sealing). Third Row (Restoration Treatment) indicates surface restoration (e.g., overlay).
Treatment	Name of treatments from the "Treatment Descriptions" report.
Yrs. Between Crack Seals	First Row - number of years between successive treatment applications specified in the first row (i.e., CRACK treatment).
Yrs. Between Surface Seals	Second Row - number of years between successive treatment applications specified in the second row (i.e., SURFACE treatment).
Number of Sequential Seals	Number of times that the treatment application in the second row (i.e., SURFACE treatment) will be performed prior to performing the treatment application in the third row.

Note that the treatments assigned to each section should not be blindly followed in preparing a road maintenance program. Engineering judgment and project level analysis should be applied to ensure that the treatment is appropriate and cost effective for the section.

Appendix C

Budget Needs Analysis Results

Budget Needs Reports

The purpose of this section is to answer the question: ***If the City had all the money in the world, what sections should be fixed and how much will it cost?*** Based on the Maintenance & Rehabilitation (M&R) decision tree and the PCIs of the sections, the program will then select a maintenance or rehabilitation action and compute the total costs over a period of ten years. The Budget Needs represents the "ideal world" funding levels, while the Budget Scenario reports in the next section represent the most "cost effective" prioritization possible for the actual funding levels.

A budget needs analysis has been performed. The summary results from the analysis are shown below. An interest rate of 4.00% and an inflation factor of 4.00% were used to project the costs for the next ten years. This report shows the total ten-year budget that would be required to meet the City's standards as exemplified in the M&R decision tree.

Budget Needs reports included in this appendix are listed below:

- Projected PCI/Cost Summary
- Preventive Maintenance Treatment/Cost Summary
- Rehabilitation Treatment/Cost Summary

Needs - Projected PCI/Cost Summary

This report summarizes and projects the network PCI over the ten-year analysis period, both with and without treatments applied. It also reports the associated costs, which are based on the treatment unit costs presented in the M&R decision tree.

COLUMN	DESCRIPTION
Year	Year in the analysis period.
PCI Treated	Projected network average PCI with all needed treatments applied.
PCI Untreated	Projected network average PCI without any treatments applied.
PM Cost	Total preventive maintenance treatment cost.
Rehab Cost	Total rehabilitation treatment cost.
Cost	The budget required for each year in the analysis period to meet the City's standard as shown on the M&R decision tree.
Total Cost	Total budget required over a ten-year period.

Needs - Preventive Maintenance Treatment/Cost Summary

This report summarizes each preventive maintenance treatment type, quantity of pavement affected, and total costs over the analysis period. It also summarizes the total quantities and costs over the next ten years.

COLUMN	DESCRIPTION
Treatment	Type of preventive maintenance treatments needed.
Year	Year in the analysis period (i.e., 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, and 2033).
Area Treated	Quantities in linear feet (Seal Cracks) or square yard (Slurry Seal).
Cost	Maintenance treatment cost.
