

About Cornerstone Environmental Group, LLC is an engineering consulting and field service firm dedicated to providing services to the solid waste industry and commercial, industrial, and agricultural clients nationwide. Among our key services are organics management and landfill gas-to-energy, including development and implementation of the innovative patent-pending BioCNG™ biogas conditioning system, which economically produces biogas-based fuel to power CNG vehicles.

Founded by industry leaders who have helped develop and shape solid waste, energy, and environmental technologies for over 30 years, the entire Cornerstone organization shares a common vision – to serve its clients with energy, integrity, and innovation.

Cornerstone’s mission is to provide the highest quality environmental, solid waste engineering, field service, construction management and professional services, from project conception to completion.

Achievements

- Worked with a Northern California Waste Management landfill to convert to a covered aerated static pile (CASP) composting facility; increasing approved organic compost sold to local farmers and vineyards.
- Developed BioCNG™ system for CleanWorld’s Sacramento BioDigester at Sacramento South Area Transfer Station (SATS) that provides cheaper, cleaner-burning CNG fuel produced from food waste digester gas for waste-hauling trucks.
- Developing a BioCNG™ biogas-to-compressed natural gas system for Zero Waste Energy, LLC for the Blue Line Biogenic CNG Facility in San Francisco, an anaerobic digestion system that processes food and wastes into high quality biogas.
- Provided landfill gas services for six of Waste Management’s northern California landfills to keep systems running properly and produce more green energy while minimizing flaring to atmosphere.
