

### **Diamonds in the Wind, Saori Ide and Jonathan Russell, 2021**

Located at Sean Diamond Park, Diamond's in the Wind is an 18' high kinetic wind sculpture made of stainless steel. This large iconic sculpture features two diamond shapes, one nestled inside of the other, that move with the wind in opposite directions. This colorful artwork, visible from a distance, will welcome residents and visitors to Sean Diamond Park. It can be enjoyed from multiple vantage points, such as a view while sitting on a nearby bench or when walking around and even when looking directly upward. Every view will present a different mosaic and pattern of intertwining lines. The base of the sculpture is a four-sided tapered column that reflects the idea of a half diamond. The green diamond shaped folded leaves around the top of the base represent individual community members coming together to embrace and support each other. As the sun shines through them, they cast beautiful patterns on the ground. The tree like form of our sculpture signifies growth and resilience as it stands firmly rooted in the ground and reaches upwards. The flower like diamond shapes represent both seeds and blossoms; celebrating the accomplishments of this community.
